

Additional specifications for the FTL process

In general, the description VDA 4913 applies. The deviations for the transport management (FTL process) are described below. Please coordinate this number in advance with the forwarder (for which truck/transport which number is assigned).

Record type	Pos.	Position	Data element	Example of entry / Code
SA 712	13	62-75	Transport partner number	12345678
SA 712	14	76-77	Means of transport code	02
SA 712	15	78-102	Means of transport number	XXXX0001 (Bordero-number)
SA 712	16	103	Means of transport information code	2
SA 712	17	104-111	Means of transport information	BB D 123

Sample view in IBL-DQM:

Transport partner number	SA712 Pos. 13	12345678
Carrier	SA712 Pos. 05	TEST
Means of transport code	SA712 Pos. 14	Bordero number
Means of transport number	SA712 Pos. 15	XXXX0001
Means of transport information code	SA712 Pos. 16	Number plate
Means of transport information	SA712 Pos. 17	BB D 123

Example from the entry in VDA 4913:

```

```

- Depending on the transport concept, the border and forwarding number must be transmitted in the shipping notification.
- It must be ensured that the transmission of the shipping notification for each individual shipment can take place both with and without bordero number.
- A transmission of non-coordinated bordero numbers is not permitted, since these lead to an incorrect EDI processing.
