Where can I find which DQM functions and what can I do with them?

- D301 – Search Shipment Data
  - all data of the last 6 weeks (EDI transmission date) are displayed here and can be corrected until processing in the plant (reposted symbol). Accompanying documents can also be printed.

- D302-D330 New Shipments
  - New shipments can be created for various processes. Partly with entry aids by entering order data or, for example, the pickup sheet number. All relevant accompanying documents can be generated.

- D4XX Statistics
  - These features provide detailed insights and analytics that make it possible to identify vulnerabilities and continuously improve data quality.

- D500
  - All manual delivery notes that had to be entered in the plants are displayed here. Timely and error-free transmission (if necessary with the D302-D330 functions) can avoid costs.

- D502
  - Shipments that have not been corrected are displayed here. Timely correction in the D301 can avoid costs.

i

- With the Direct Jump function, you can enter directly into functions of the IBL.
- Hint: D301, D400, are the favorites that users use the most.
