

DFU Data/ VDA4921

- VDA4921 is required - need to be send before unloading in Jawor / [Boblingen](#).
- VDA4921 need to be created - in case of GS once goods leave Freight Forwarder Warehouse. VDA4921 for FTL are prepared by supplier, but forwarder is obligated to inform supplier about [bordero](#) number
- In case of missing VDA4921 unloading will be refused and truck will wait for the first TS once VDA will be available for Jawor / [Boblingen](#).
- Freight Forwarder should be aware that missing VDA4921 will be always claimed via [Rekla](#) Tool
- In case of missing data VDA4913 from Supplier Freight Forwarder is responsible and obligated to put information about loaded DN in IBL
- VDA Manual -> in T602 or T603 function in IBL, you have to create manual data according loaded DN. You just need to provide supplier number, consignment number and DN number.

DFU Data/ VDA4921

- VDA Data Quality - Transport Documents, CMR, VDA 4913, VDA4921 and Transport invoice need to be transparent - they need to have the same weight, supplier number, forwarder number, ABL (in case of empty containers delivery it need to be always 100B).
- Invoice have to be always prepared based on data from CMR and IBL (weight etc.), because they have to match. MBMPL will not accept invoice with data from pick up request
- Forwarders cannot split consignments during pick up or creating VDA4921, whole consignment have to be always delivered on one [bordero](#) otherwise invoice will be blocked
